Dear Speechify Hiring Team,

I am excited to apply for the Software Engineer – Platform (Intl) role at Speechify. As a software engineering undergraduate specializing in backend and full-stack development, I have been deeply inspired by Speechify's mission to make reading accessible for everyone. I admire how your products empower millions of people with learning differences, and I would be proud to contribute to a platform that creates such meaningful impact.

In my recent projects, I have built scalable backend systems using Node.js, TypeScript, Express, and MongoDB, including a complete hotel reservation and management system with authentication, API integrations, payments, admin modules, and cloud deployments. I enjoy designing efficient APIs, improving performance, and ensuring clean, maintainable architecture—skills that fit directly with Speechify's Platform Engineering needs.

I am also comfortable working with cloud platforms and CI/CD workflows, and I have hands-on experience managing deployments, environment variables, and distributed development environments. I learn quickly, communicate clearly, and thrive in fast-paced, asynchronous environments. I am particularly drawn to Speechify's culture of autonomy, speed, and ownership.

Beyond the technical fit, I genuinely care about building products that make a difference. Being part of a team working at the intersection of AI and audio aligns perfectly with my long-term goals as an engineer.

Thank you for considering my application. I would welcome the opportunity to discuss how my technical skills, work ethic, and passion for accessible technology can contribute to Speechify's mission.

I have included my GitHub, resume, and portfolio below.

Sincerely,

Dilan Avishka
